Dear Customer,

thank you for choosing our product in considering how to protect your property. We know that choosing the right alarm is not easy. You expect a reliable solution that never lets you down. We believe that our alarms will be to your full satisfaction.

An innovative feature worthwhile mentioning is the exceptional support in the Jablotron Web self-service application, which brings the use of the alarm and its remote availability to a new level.

We used all our experience and created an application with top-end parameters, yet it is user-friendly. This allows you to access your alarms immediately on your remote control intuitively to obtain the necessary information about status. You can take advantage of receiving free notifications, monitor the power consumption and temperature in the premises and more. In addition to the excellent level of security our alarms provide, we endeavour to bring you other benefits as well.

We would be pleased if you become another satisfied user of the thousands already using the Jablotron Web self-service application. All services of the Jablotron Web self-service application are free.

Your Jablotron team

Online preview

of the **current status of the alarm**. A quick overview of the status of all Jablotron produced devices you are using. **Everything is available neatly in one place.**

Alarm control

easily from anywhere, anytime. A safe and easy option to control your alarm remotely through a web application or smart phone applications.
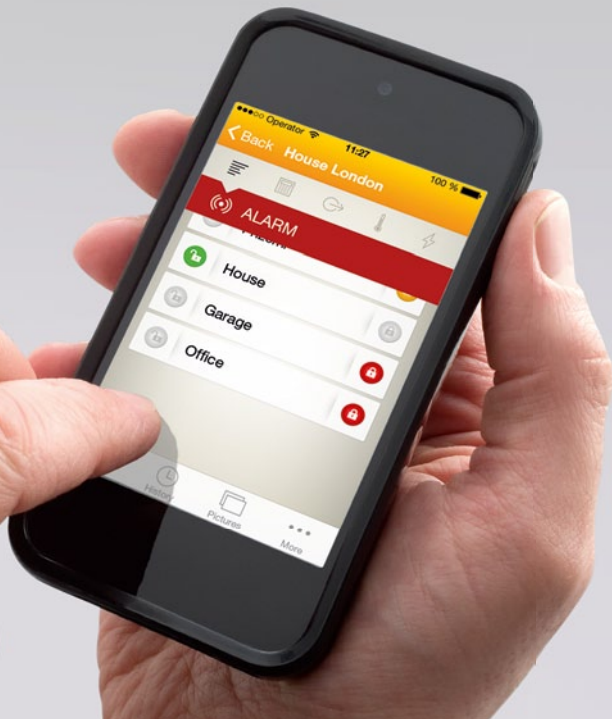

View photos

shot with motion detectors with a camera. An overview of photographs taken by the detectors during an alarm and the option to request the current shot.
